DETAILED ACTION - ALLOWANCE

Claims 1-10 are allowed. All claims thus being allowable, prosecution on the merits is closed in this application. A statement of the examiner's reasons for allowance is provided in the paragraph which follows below.

Reasons for Allowance

The instant application is deemed to be directed to a nonobvious improvement over the invention of Uno (U.S. Patent No. 6,535,326) disclosed by applicant as being a representative example in the art to which the instant invention pertains. The instant invention provides first and second electrodes disposed on a substrate in a particular arrangement wherein the first electrode has an areal proportion of 0.1% - 80% per an area of display pixel and is disposed in a scattering layer having a thickness of 1-100 μm as recited *inter alia* in applicant's sole independent claim (Claim1, Lines 16-19).

The prior art taken either singly or in combination fails to anticipate or fairly suggest the limitations of applicant's independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. In particular, the thickness of the scattering layer disclosed in JP 09-211499 A (Toshiba Corp.) has a thickness of only 0.5 μm (e.g. JP 09-211499 was none the less cited as an x-type reference for claims 1, 6-8, and 10 in a search report PCT/ISA/210 prepared for the International Application PCT/JP03/14380 corresponding to the instant application). The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Other Remarks/Information

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Evans et al. (U.S. Patent No. 3,612,718) was cited in the instant specification (Page 1,

Art Unit: 2873

Lines 26-27; with the inventors improperly identified as "Harold D. Lees et al.") but was not made of record by applicant under an Information Disclosure Statement. Similarly, Uno (U.S. Patent No. 6,535,326) was cited in the instant specification (Page 3, Line 19; although improperly identified as "Japanese Laid-Open Patent Application No. 6,535,326") but was not made of record by applicant under an Information Disclosure Statement.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>.
